

United States Road Assessment Program

FACT SHEET

What is usRAP?

usRAP a **free innovative and proactive tool** for analyzing road safety and generating **data driven solutions** to correct hazards.

The program began in 2004 and is now overseen by the **Roadway Safety Foundation**. It has been validated by international and domestic research.

usRAP is **recognized by the Federal Highway Administration** and its Every Day Counts Initiative as a tool for conducting data-driven safety analysis.

How Does It Work?

Using photo or videologs, usRAP produces star ratings on familiar 1-5 scales and detailed safety investment action plans for **any road**—urban or rural, high or low traffic volume, multi-lane freeway or gravel back road.

Who Should Use usRAP?

usRAP can be used by any and all highway agencies and their consultants.

The program is especially useful where traditional crash data is lacking or not reliable, and/or where traffic volumes may be too low to detect patterns, even if there are high-risk designs.

usRAP is available to highway agencies & their consultants **free of charge!** For more info, visit usRAP.org
